

Embed Jlive Calendar on my Website

Jlive makes it easy to follow your organizations event calendar feed in third party calendars such as Google Calendar, Apple Calendar, and even embeddable website calendars such as the WordPress Plug-in [The Events Calendar](#) and [Time.ly](#).

How to Copy the Calendar Feed URL for your Organization.

Jlive makes it easy for an organization to automatically add their public published feed to their existing calendar (Google, iCal, Outlook).

Click on the calendar icon in the top right corner and then click to Copy the Calendar Feed URL to your clipboard.

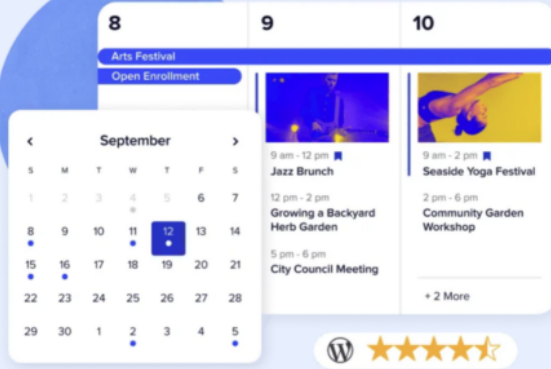

The Events Calendar

The #1 Calendar for WordPress

More than 28 million downloads and 800,000 active installations can't be wrong.

See it in action

Highlight your events with multiple views.

Month view

A classic calendar view to display a whole month of events.

List view

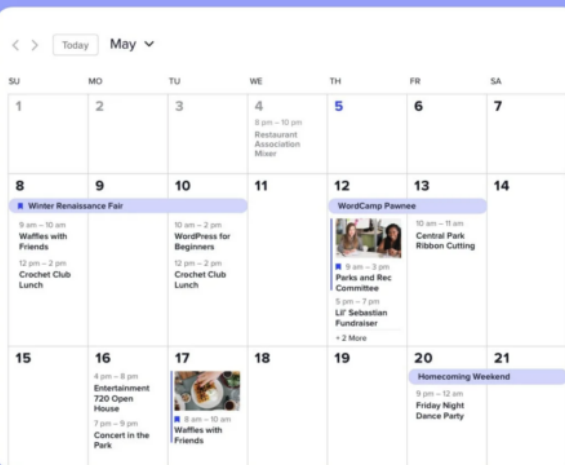

Day view

Week view

Imports

Imports

Use the options below to configure your imports. Global Import Settings apply to all imports, but you can also override the global settings by adjusting the origin-specific options. Check your Event Aggregator Service Status on the [Troubleshooting Page](#).

[Update Authority](#) | [Global](#) | [CSV](#) | [Eventbrite](#) | [iCalendar](#) | [ICS File](#) | [Google Calendar](#) | [Meetup](#) | [Other URLs](#)

Event Update Authority

You can make changes to imported events via The Events Calendar and see those changes reflected on your site's calendar. The owner of the original event source (e.g. the iCalendar feed or Meetup group) might also make changes to their event. If you choose to re-import an altered event (manually or via a scheduled import), any changes made at the source or on your calendar will need to be addressed.

Event Update Authority

☒ Overwrite my event with any changes from the original source.

☐ Do not re-import events. Changes made locally will be preserved.

☐ Import events but preserve local changes to event fields.

Global Import Settings

Default Status

Published

The default post status for events

Default Event Category

No default category

The default event category for events

Show Map

No

Show map by default on imported event and venues

Import Limit Type

By number of events

Limit the number of imported events by number, date range, or not at all; on slower websites this may impact the success of imports. Selecting a shorter time period or a smaller number of events may improve results.

Import Quantity Limit

500

When importing from an event source, this is the maximum number of events that will be imported; on slower websites this may impact the success of imports. Setting this to a smaller number may improve results.

Import Process System

Asynchronous

The Asynchronous import process is faster and does not rely on WordPress Cron but might not work correctly in all WordPress installations, try switching to the Cron-based process for maximum compatibility.

Stop current processes

If you want to stop and clear current asynchronous import processes [click here](#).

Delete Duplicate/Removed Events for Scheduled Imports

One thing Event Aggregator does NOT do is delete events when events are removed from a source. In those cases, you would need to delete them manually.

Also, if the source of the import, for some reason, changes the unique identifier of an event, this causes a duplicate event to be created in your calendar on your site.

For many people, these two scenarios aren't ideal. To solve this issue, you can download and activate a small [Extension](#).

Download Extension

 **Heads up!** We provide limited support for extensions, but you can still open a ticket over at our [Help Desk](#) to report any issues.

☒ Got it, let's download!

DOWNLOAD

[Install Instructions](#)

This extension gives you an option on what you'd like to do in these situations by adding an additional option under Events > Settings > Import tab. Just choose from the following options:

- Do not delete duplicate/removed events.
- Send duplicate/removed events to trash.
- Permanently delete duplicate/removed events.

When your one-time or scheduled imports run, this add-on will look for any current or future events from previous imports (from the same source). If they are not found in the new import, they will be removed based on the option you choose.

Note: This setting will have no effect if the “Event Update Authority” setting is set to “Do not re-import events. Changes made locally will be preserved.”

Additional Options

Delete Duplicate/Removed Events for Scheduled Imports

☒ Do not delete duplicate/removed events.

☐ Send duplicate/removed events to trash.

☐ Permanently delete duplicate/removed events.

Check this box to delete events that are removed from the import source. This will also remove duplicates in the case where the source changes the unique identifier for an event. ** NOTE: If your “Event Update Authority” setting is “Do not re-import events...”, this setting will have no effect.

Link Directly to Website URL, Bypassing Default Event Page

☒ Link to the default single event page.

☐ Link directly to the event website URL

Instead of linking to the Event page within The Events Calendar, enable this option so that visitors can be sent directly to the URL in the Website URL field. ** NOTE: This setting only affects legacy views and will not work in the upgraded views. **

Retain Line Breaks in Event Description

☒ Remove all line breaks from event descriptions.

☐ Retain all line breaks within event descriptions.

Some import sources allow for linebreaks. Choose whether to remove linebreaks or keep them.

Save Changes

Here is info on how to automatically delete events that are no longer in the ICS feed.

[Event Aggregator: Additional Options](#)

TheEventsCalendar / Time Zone

If you experience time-zone issues, on the General Settings, you can set the Timezone here.

Timezone

Detroit

▼

Choose either a city in the same timezone as you or a UTC (Coordinated Universal Time) time offset.

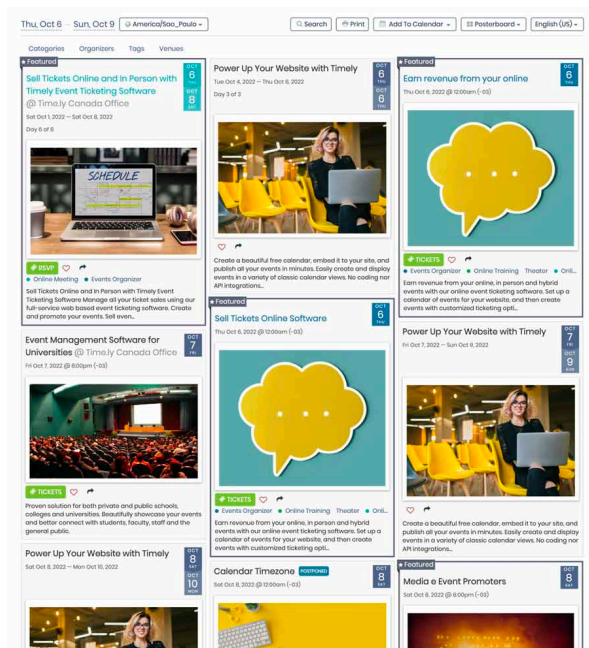

Universal time is 2024-03-25 19:12:46 .

Local time is 2024-03-25 15:12:46 .

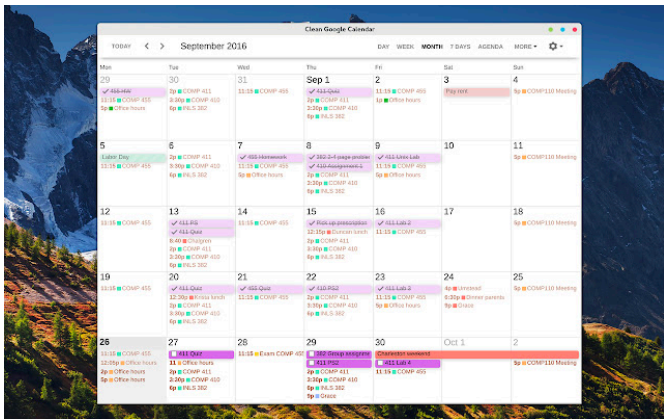

Time.ly

How to Embed Time.ly Calendar into my Website

[Time.ly](#) is a popular embeddable calendar service. If you purchase this third party tool, you can use it to follow your Jlive Calendar URL.

Google Calendar

How to follow a Calendar URL in Google Calendar

How to Import a ICS file by adding an URL in Google Calendar

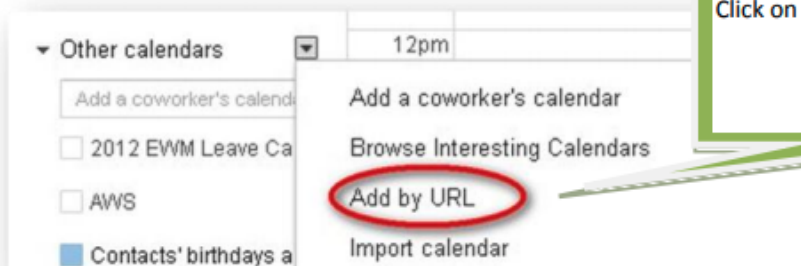

Google Calendar allows you insert an ICS file by adding an URL (we are pointing to the Web URL that the ICS file has been posted to).

- Log into your Google calendar.
- On the left side of the page, find “Other Calendars” and click on the pull down arrow on the right.

Find “Other Calendars” and click on the pull down arrow on the right.

Click on “Add by URL.”

Click on “Add by URL.”

Add by URL

URL:

If you know the address to a calendar (in iCal format), you can type in the address here.

☐ Make the calendar publicly accessible?

Add Calendar **Cancel**

Insert URL here.

After you add the URL , click "Add Calendar."

Add by URL
