Credit Card Storage

Jlive does not directly receive or store any credit cards.

Instead, Jlive uses Stripe as a secure payment processor. When a user decides to make a purchase or Save their Credit Card to their User Profile, what is actually happening is that a Stripe token is created and Stripe securely handles everything related to the actual transaction and storage of the details.

Here is the official Stripe documentation for you tech nerds:

https://stripe.com/docs/saving-cards
