

Neighborhoods

Some Markets have the Neighborhoods feature enabled.

Event Admins

Event Admins in these markets can set the Location Targeting for their events to specific Neighborhoods on the Settings Step when creating or editing events.

Users

Users in these markets are be able to visit the Browse all events page (jlive.app/events), and set the Neighborhood filter to only show events and programs that are targeted to the chosen neighborhoods.

Possible Future User Feature

To include Neighborhoods in Top-Navigation Market Selector. However, we are not certain that we want this to fully filter out all events that are not targeted to the chosen neighborhood, as this may be too strong and not what the user actually intended.
