

Outdated images on Facebook when sharing event

How to Fix Outdated Images on Facebook Website Preview

Updating website preview when you share it on Facebook

Whenever you post a link to your website on Facebook, it will automatically **create a preview** comprised of an image, the link title, and a short descriptive text taken from the meta tags in your website's code.

This content is cached by Facebook directly and can last up to **30 days**. In case the image displayed is incorrect or outdated, it may indicate that Facebook's cache needs to be refreshed.

To update the images, go to the [Facebook Sharing Debugger](https://developers.facebook.com/tools/debug) tool and type in your URL. This will force an update to the Facebook cache with the correct image and preview information ☐

Sharing Debugger lets you preview how your content will look when it's shared to Facebook and debug any issues with your Open Graph tags.
