

# Set Custom Email Sender

Admins can set the Email Sender for their events. This will ensure that Registration Emails and other emails sent for a specific event show the Email Sender of choice. The email will still be sent from `noreply@jlive.app`, but it will appear like this:

*“My Organization<noreply@jlive.app>”*

## How To:

On Create Event / Settings Step, enable “Custom Send From Display Name”

The screenshot shows a settings card with a blue circular icon containing two people. The title is "Custom Send From Display Name" with a checked checkbox to its right. Below the title is the text "Federation CJA - JLive <noreply@jlive.app>". A horizontal line separates this from the section "Jlive Registration Emails will be send from:" which contains a text input field with the value "Federation CJA".
