# Spreedly

Spreedly is a service that allows Jlive to securely store credit cards and use them to transact against any number of payment gateways and third party APIs. It does this by simultaneously providing a card tokenization/vault service as well as a gateway and receiver integration service. Payment methods tokenized by Spreedly are stored at Spreedly, allowing Jlive to securely initiate payments through different payment gateways, all without ever seeing or storing credit cards on Jlive servers.

How to Connect to Payment Gateway via Spreedly

Connect to Payment Gateway Via Spreedly

Which payment Gateways are supported by Jlive?

Moneris – This is often preferred in Canada

Coming Soon

[Paypal](#) – Known to offer good [non-profit rates](#)

[Stripe](#)

If you have a specific Payment Gateway you would like to use, please check to see if it is supported by Spreedly. If it is, then Jlive should be able to activate this for your organization.
