

# Two-Factor Authentication

As any user you can enable Two-Factor Authentication in order to secure your Jlive account by requiring two different means to prove your identity when logging in. With Two-factor Authentication enabled, you will need to use an Authenticator App such as Google Authenticator to obtain a 6-digit code each time you login. Jlive Super Admins are required to have this enabled.

Download Google Authenticator for [iOS](#) | [Android](#)

## How to set-up Two-Factor Authentication

1. Visit your User Profile
2. Click on Settings and click Enable

### Two-Factor Authentication
